选一款胶片，开始创作。

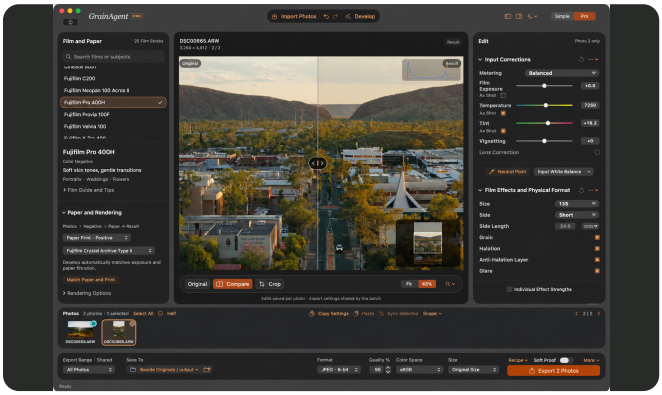

从轻松出片到精细调整，GrainAgent 让一张照片和一整组作品，都能拥有你喜欢的胶片质感。

两种工作方式

简单模式

像相机一样选择胶片，调整曝光与效果。

专业模式

选择胶片与相纸，在一个窗口中细调和输出。

快速开始

01 装入照片　02 选择胶片　03 调整效果　04 输出照片

01 安装与首次打开

适用于搭载 Apple 芯片（M 系列）、运行 macOS 14 或以上系统的 Mac。将 GrainAgent.app 拖入「应用程序」，然后打开。

若首次打开时 macOS 拦截了应用，请确认下载来源。尝试打开后，前往「系统设置 → 隐私与安全性」，找到 GrainAgent 并点击「仍要打开」。本版本尚未经过 Apple 公证。

支持的语言

简体中文、English、Français 和 Español。首次启动默认跟随系统，未匹配的语言使用英语。可在「GrainAgent → 设置 → 常规 → 语言」中切换。

JPEG · PNG · TIFF · HEIF · RAW

RAW 的具体机型支持取决于当前 macOS 版本。以上界面图基于应用制作并经过视觉修饰。

从照片到成片

下面的流程适合快速编辑，也适合将同一风格应用到一组照片。

01 装入照片，选择胶片

点击「装入照片」，选择一张或多张照片，也可以将照片拖入预览区。简单模式下转动拨轮，查看胶片介绍并选择喜欢的风格。

02 调整当前照片

拨动曝光刻度，并按需开启颗粒、光晕、耀光、片边或日期。负片呈现反色时，点击「配纸」，使用对应相纸获得正片。

03 为其他照片套用效果

每张照片分别记住参数。选中已调整的照片，点击「套用其他…」，选择可接收的照片；手动调整过或作为样板用过的照片会受到保护。复制前可排除个别照片，复制后可撤销。

04 选择位置并输出

点击「输出」，选择当前照片或全部照片，设置保存位置与格式。每张照片按自己的参数处理，输出设置整批共用。

> **初始输出设置**
> JPEG · 95% · Display P3 · 原始尺寸
> 默认保存在各自原照片旁的 output 文件夹，可自行更改。

05 继续调整与恢复工作

点击右上角「专业」，可选择相纸、细调色彩、对照原图，并在窗口底部选择照片和输出。重新打开应用后，可以继续上次的工作。

Choose a film. Make it yours.

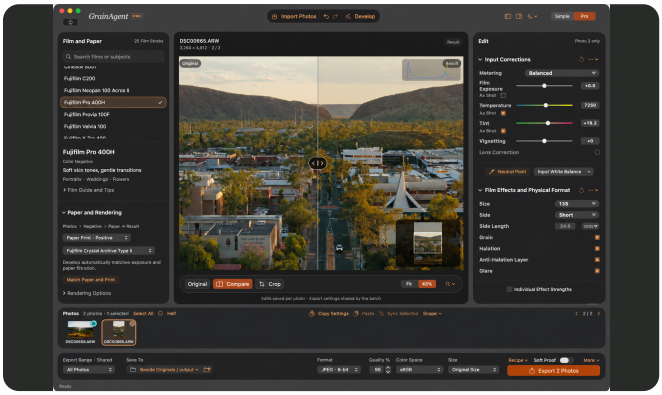

From a quick edit to a carefully finished series, GrainAgent brings film character to your photographs.

Two ways to work

Simple

Choose a film, set exposure and add effects.

Pro

Choose film and paper, fine-tune and export.

A quick workflow

01 Import **02** Film **03** Adjust **04** Export

01 Install and open

Requires an Apple silicon Mac (M series) running macOS 14 or later. Drag GrainAgent.app into Applications, then open it.

If macOS blocks the first launch, confirm the download source. After trying to open the app, go to System Settings → Privacy & Security, find GrainAgent and select Open Anyway. This version has not been notarized by Apple.

Languages

English, Simplified Chinese, French and Spanish. The app initially follows the system language and falls back to English. Change it in GrainAgent → Settings → General → Language.

JPEG · PNG · TIFF · HEIF · RAW

RAW camera support depends on your macOS version. Interface illustrations are based on the app and visually retouched.

From photo to finished image

Edit one photo, or apply a look across a batch.

01 Import and choose a film

Select Import Photos to choose one or more images, or drag them into the preview. In Simple mode, turn the dial to explore film descriptions and choose a look.

02 Adjust the current photo

Adjust exposure and turn grain, halation, glare, borders or date on as needed. If a negative film appears inverted, select Match Paper to produce a positive.

03 Apply a look to other photos

Each photo keeps its own settings. Select an edited photo and choose Apply to Others… to copy its look to eligible images. Manually edited photos and photos used as templates are protected. Exclude individual photos before copying, and undo the copy if needed.

04 Choose a destination and export

Select Export, choose the current photo or all photos, and set a destination and format. Each photo uses its own edits; export settings are shared by the batch.

INITIAL EXPORT SETTINGS

JPEG · 95% · Display P3 · Original size
Saved in an output folder beside each original by default.

05 Fine-tune and resume

Select Pro at the top right to choose paper, fine-tune colour, compare the original and export selected photos. Reopen GrainAgent to continue your previous work.
